§3. Proofs

Set

$$
P_{f}(t)=\prod_{j=1}^{n+1} \frac{t-t^{1 / w_{j}}}{t^{1 / w_{j}}-1}
$$

$P_{f}(t)$ is a polynomial in $t^{1 / m}$ over $\mathbf{Z}$ for some integer $m>0$.
Two non-degenerate weighted homogeneous polynomials $f$ and $g$ have the same weights if and only if $P_{f}(t)=P_{g}(t)$.

Theorem 2.6 Let $f$ and $g$ be non-degenerate weighted homogeneous polynomials in $\mathrm{C}^{n+1}$. Then, their Seifert forms $L_{f}$ and $L_{g}$ are Witt equivalent over $\mathbf{R}$ iff

$$
P_{f}(t) \equiv P_{g}(t) \quad \bmod t+1
$$

$\Longrightarrow \quad f$ and $g$ have the same equivariant signatures.
Then, we can prove that they are Witt equivalent over $\mathbf{R}$.
This completes the proof.

Proposition 2.8 Let

$$
f(z)=\sum_{j=1}^{n+1} z_{j}^{a_{j}} \quad \text { and } \quad g(z)=\sum_{j=1}^{n+1} z_{j}^{b_{j}}
$$

be Brieskorn-Pham type polynomials. Then, their Seifert forms are Witt equivalent over $\mathbf{R}$ iff

$$
\prod_{j=1}^{n+1} \cot \frac{\pi \ell}{2 a_{j}}=\prod_{j=1}^{n+1} \cot \frac{\pi \ell}{2 b_{j}}
$$

holds for all odd integers $\ell$.

Proof.
$P_{f}(t)$ and $P_{g}(t)$ are polynomials in $s=t^{1 / m}$ for some $m$.
Put $Q_{f}(s)=P_{f}(t)$ and $Q_{g}(s)=P_{g}(t)$.
Then, $P_{f}(t) \equiv P_{g}(t) \bmod t+1$ holds
$\Longleftrightarrow \quad Q_{f}(\xi)=Q_{g}(\xi)$ for all $\xi$ with $\xi^{m}=-1$.

Proof.
$P_{f}(t)$ and $P_{g}(t)$ are polynomials in $s=t^{1 / m}$ for some $m$.
Put $Q_{f}(s)=P_{f}(t)$ and $Q_{g}(s)=P_{g}(t)$.
Then, $P_{f}(t) \equiv P_{g}(t) \bmod t+1$ holds
$\Longleftrightarrow \quad Q_{f}(\xi)=Q_{g}(\xi)$ for all $\xi$ with $\xi^{m}=-1$.
Note that $\xi$ is of the form

$$
\exp (\pi \sqrt{-1} \ell / m)
$$

with $\ell$ odd and that

$$
\frac{-1-\exp \left(\pi \sqrt{-1} \ell / a_{j}\right)}{\exp \left(\pi \sqrt{-1} \ell / a_{j}\right)-1}=\sqrt{-1} \cot \frac{\pi \ell}{2 a_{j}} .
$$

Then, we immediately get Proposition 2.8.

Remark 3.4 Theorem 2.9 implies that two algebraic knots $K_{f}$ and $K_{g}$ associated with certain Brieskorn-Pham type polynomials are isotopic if and only of they are cobordant.

According to Yoshinaga-Suzuki, two algebraic knots associated with Brieskorn-Pham type polynomials in general are isotopic if and only if they have the same set of exponents.

## Cobordism and isotopy for Brieskorn-Pham type polynomials

Remark 3.4 Theorem 2.9 implies that two algebraic knots $K_{f}$ and $K_{g}$ associated with certain Brieskorn-Pham type polynomials are isotopic if and only of they are cobordant.

According to Yoshinaga-Suzuki, two algebraic knots associated with Brieskorn-Pham type polynomials in general are isotopic if and only if they have the same set of exponents.

In fact, they showed that the characteristic polynomials coincide if and only if the Brieskorn-Pham type polynomials have the same set of exponents.
